

Blockchain principles applied to transaction operations on the Real Estate Market

Andres Salgado, Jorge Valdeiglesias, and Kartikeya Yellayi

Abstract—The abstract goes here.

1 INTRODUCTION

WITH the advent of “blockchain” technologies, as well as the necessity to establish a system where the trust of transactions could be offloaded to machines, we ventured into exploring how a system based on an Ethereum blockchain could accurately execute a series of smart contracts in order to validate a transaction between two entities.
